

# Font Directory Pro

## product brief

### Simplify managing your font collection

Font Directory Pro, and the FontFS filing system it uses underneath, form a group of programs intended to greatly simplify working with large collections of fonts on RISC OS. Font Directory Pro is originally by LOOKsystems.

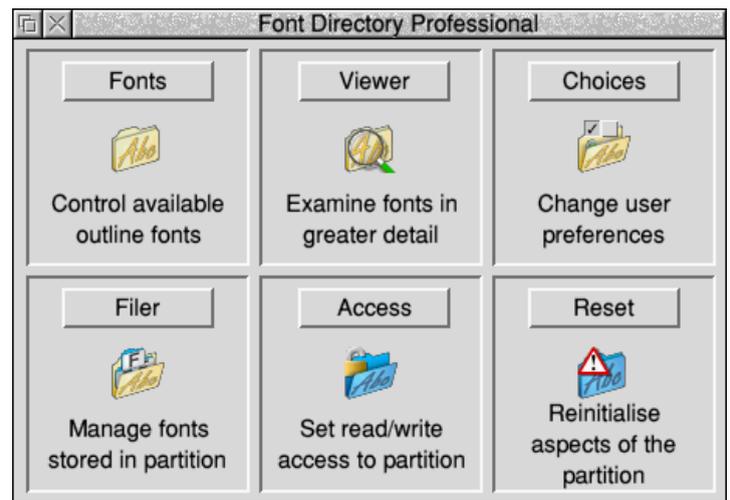

It's always to hand on the left side of the icon bar, and with a single click will show all the fonts under its control using the fonts themselves: what you see is what you get (WYSIWYG) technology.

### Key features at a glance

The product comprises 6 applications, each launched with a single click:

- Fonts (also available from the icon bar)
  - Activate and deactivate fonts
  - Interactively search the collection
  - Scan documents to find which fonts they use
  - All fonts shown WYSIWYG
- Viewer
  - Preview text in the chosen font
  - Step through the collection with "font player"
  - Change colour, emphasis, weight, leading
  - Grid view versus character codes

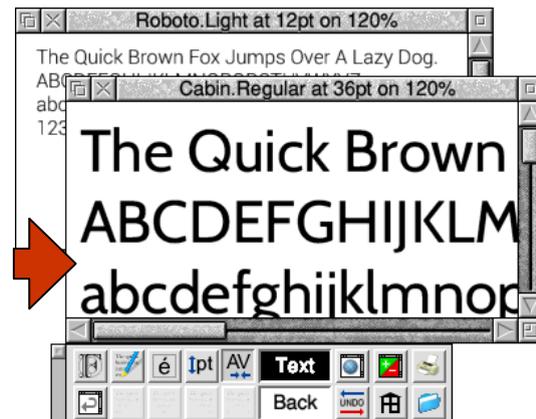

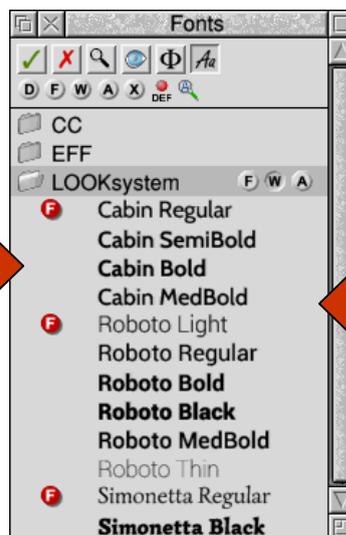

- Filer
  - Open the vault containing your fonts
  - Dynamically resize as needed
  - Locate and skip invalid fonts files
  - Compile an index for instant access
- Choices
  - Customise every aspect of Font Directory Pro exactly how you like to use it
  - Save the settings as defaults for when you next start your computer
- Access, Reset
  - Password protect your fonts from accidental deletion or changes by other users
  - Wipe clean the font partition or font sets, and recover lost password projection

Cut down unwieldy font menus filled with obscure font names and instead see a visual representation of

the fonts, arranged how you choose.

The display can also be filtered by font name, weight, or both.

Preview how the proposed font will look using the viewer.

## Specifications
